Architecture Development Part 4:

The screenshot displays a VMware Workstation window titled "Ciufu-UPHIE-192.168.17.38 - VMware Workstation". Inside the VM, a Firefox web browser is open to the "HAPI FHIR" server interface at "localhost:8080". The interface features a dark sidebar on the left with a list of FHIR resources, including Account, ActivityDefinition, AdverseEvent, AllergyIntolerance, Appointment, AppointmentResponse, AuditEvent, Basic, Binary, BiologicallyDerivedProduct, BodyStructure, Bundle, CapabilityStatement, CarePlan, CareTeam, CatalogEntry, ChargeItem, ChargeItemDefinition, Claim, ClaimResponse, ClinicalImpression, CodeSystem, Communication, CommunicationRequest, CompartmentDefinition, Composition, ConceptMap, Condition, Consent, Contract, Coverage, CoverageEligibilityRequest, CoverageEligibilityResponse, DetectedIssue, Device, and DeviceDefinition. The main content area has a white background with the "HAPI FHIR" logo at the top right. Below the logo, the text "COMPANY NAME" and "YOUR SAMPLE TEXT HERE" are displayed. A paragraph states: "This server provides a complete implementation of the FHIR Specification using a 100% open source software stack. This server is built from a number of modules of the HAPI FHIR project, which is a 100% open-source (Apache 2.0 Licensed) Java based implementation of the FHIR specification." Below this is a table with the following data:

Server	HAPI FHIR R4 Server
Software	HAPI FHIR Server - 8.8.0
FHIR Base	http://localhost:8080/fhir

Under the "Server Actions" section, there are three actions:

- Retrieve the server's **conformance** statement.** A button labeled "Conformance" is provided.
- Retrieve the update **history** across all resource types on the server.** A button labeled "History" is provided, along with a "Since" input field and a "Limit # (opt)" input field.
- Post a bundle containing multiple resources to the server and store all resources within a single atomic transaction.** A button labeled "Transaction" is provided, along with a "Bundle*" input field with the placeholder text "(place transaction bundle body here)".

At the bottom of the VMware window, a status bar reads: "To direct input to this VM, click inside or press Ctrl+G."
